DAY 2

what is a computer ?
=========
A device which have a cpu , RAM,storage OS, is called computer we can assign IP and acess it

laptop - > personal use
server - > host application
mobile - > calling
TV

human - > brain storage,ram musle memory
neuralink

human brain storage > 2.5 PB - 2000 TB
copies the storage from brai > some HD - > creates multiple copies

WHAT IS OS ?
=============
CPU,RAM,STORAGE - > HARDWARE
OS -> SOFTWARE

OS Architecture -> kernal, shell, application

MAC laptop - > paying for hardware and software

DELL laptop -> hardware, we can istall wahtever we want

LINUX - > 95% of computers were linux systesms in the world

LINUS TORVALDS -> 1991

UNIX -> HARDWARE + SOFTWARE -> HEAVY COST
IBM BIOS -> HARDWARE + SOFTWARE

Linux -> developed from the scratch using the C language inspired from unix

he developed linux and to post that code he developed GIT

Red hat - > commersial support
ubuntu
suse

distributions/flavours
even now also we can distribute the linux operating system by adding the flavours
enterprice - > immidiate support
community - > no support

FIRE WALL   == security group
=========
Ingress -> inbound / incoming traffic

Egress -> outbound / outgoing traffic --> we mostly allow everyone

here before we creating a s

Creating client server architecture
==========

0.0.0.0/0   -> any device in internet

89.87.58.166 -> this is my ip address

Client server architecture
==========
who is client and who is server

Authentication mechanism
---

what you know - > user name and password
what you have -> username and otp
what you are - > finger print,retina,palm etc

Linux server == box == node

git bash = git client, ssh client, mini linux

pwd -> present working directory
C:\Users\siva

C:\devops\daws-92s\repos

ssh-keygen -f joindevops

https://www.facebook.com/ -> HTTPS

SSH -> you will get server terminal access, secure shell
